

COPPERHEAD INDUSTRIES, LLC

# SnakeBite™

CORROSION PROOF WIRE CONNECTORS

Locks shut  
(won't open during back-filling)

No need to remove coating from wires  
(less tools required, saves time and money)

Protective dielectric sealant  
(water proof and corrosion proof)

Color-coded

All tracer wire connectors  
are not created  
**equal!**

Twist Lock Design -  
Close and twist and the  
SnakeBite Connector is locked.

YELLOW:  
Natural Gas

BLUE:  
Water

ORANGE:  
Telecom

Color-coded  
(3 APWA colors)

Made in U.S.A.

Distributed by:

SnakeBite tracer wire  
connectors  
**LOCK SHUT**  
and require  
**NO WIRE STRIPPING** –  
just plug the wire in,  
twist the connector shut!

1. Choose the SnakeBite Connector that's color coded for the job, (available in three APWA colors) and the right size (10, 12 or 14 AWG wire).
2. Simply insert the wires to be spliced into the holes (the third hole is for service connection, etc). There is no need to strip the wires, which means fewer tools and less time required.
3. SnakeBite's exclusive 90 degree Twist Lock Design means just insert wires, twist 90 degrees and the SnakeBite Connector is locked. And this means it won't accidentally open during back filling! Plus, there's a dielectric waterproof and corrosion proof sealant inside for added wire protection!
